

(~~S//REL USA, MCF I~~) Here we have broken out the data by large incidents in the six key cities in MNF-W (Ramadi, Fallujah, Hit, Hadithah, Al Qaim, and Rutbah), and large incidents everywhere else. As the top chart shows, the number of large incidents in the six key cities has been below average since February. This is a direct result of MNF-W's efforts to keep persistent presence of CF/ISF forces in these key cities, and to force insurgents out into the "hinterlands." The bottom chart shows that the number of large incidents outside the vicinity of the six key cities has recently declined from a high point in late March/early April, but still hovers around the average value. These results, combined with the previous slide, indicate that insurgents have been fleeing the cities as a result of CF/IA/IP presence.

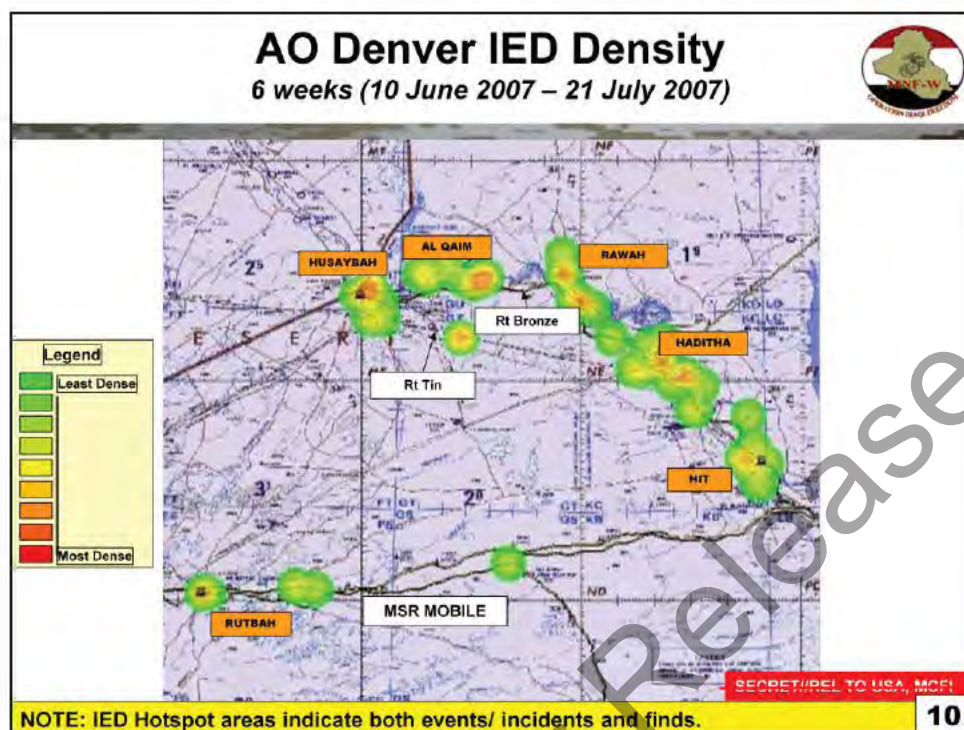

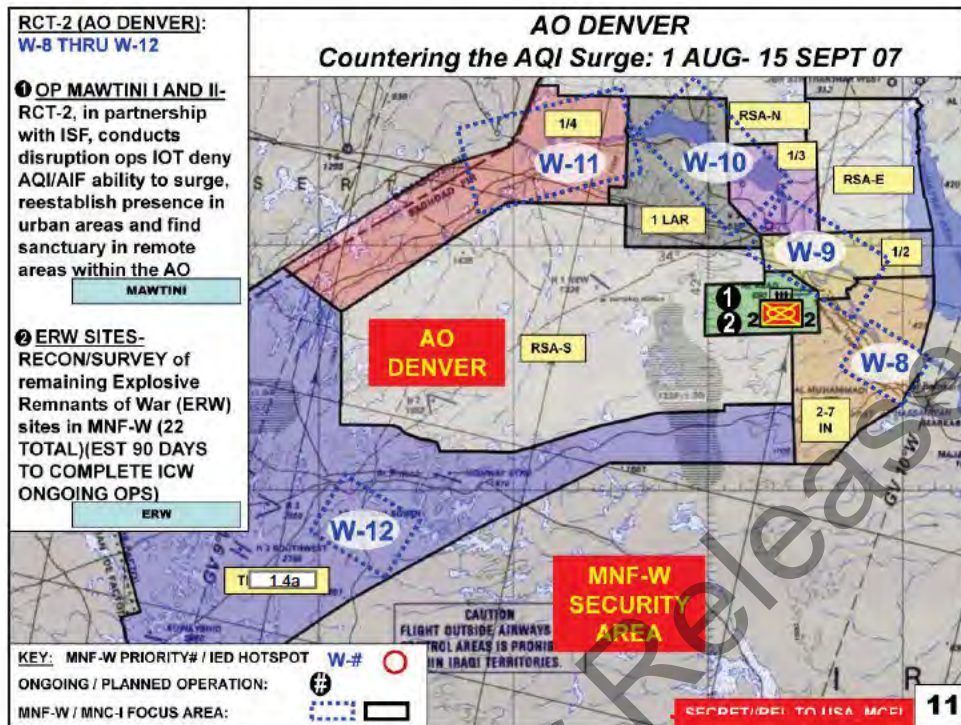

SUMMARY

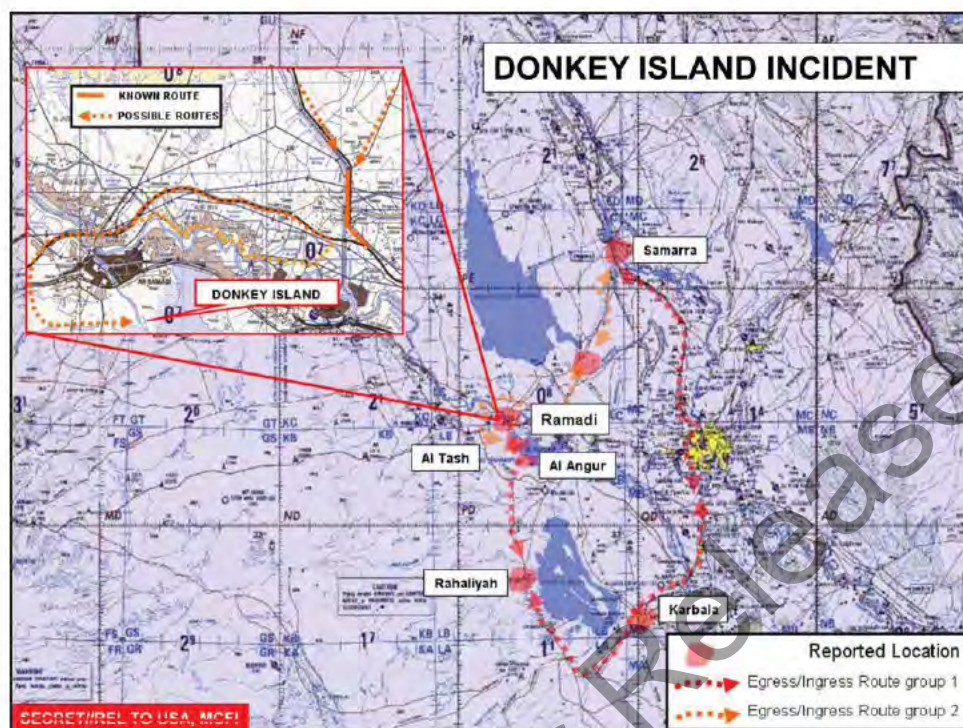

During Operation Phantom Strike, MNF-W will focus on continuing to maximize the synergy between operations within and between its AO's in order to deny AQI/AIF the opportunity to regroup and threaten key urban areas and critical infrastructure, as well as target IED Emplacement Cells within known and potential IED Hotspots.
